

Data Binding

Objectives

After completing the assigned readings and exercises, you should understand:

1. What Data Binding is and why it is useful
2. The difference between single- and repeated-value data binding and how to implement each
3. How to bind controls to array, list, and dictionary collections
4. How to bind controls to data using ADO.NET
5. How to bind controls to data using the SQLDataSource control
6. How to bind controls to data using the ObjectDataSource control

Readings/Materials (to be read BEFORE class)

- MacDonald Chapter 15
- MacDonald Chapter 22, pp. 723-728

Assignment(s)

- Complete the code repository exercises associated with this module
 - [Instructions](#)  
- Complete readings for next class period (see course calendar)
