Adding Style: CSS, Themes, and Skins

Objectives

After completing the assigned readings and exercises, you should understand:

1. What a CSS style is and how a it can be implemented, including
 1. Inline styles
 2. Internal style sheets
 3. External style sheets
2. How to use Visual Studio's Style Builder to create a CSS style
3. How to use the CSS Properties window to edit a CSS style
4. How to apply style sheet rules
5. What a theme is and how it differs from a CSS style
6. What a skin file is and how to create one
7. How to apply a theme to individual pages or an entire application
8. How to override theme settings using the StyleSheetTheme

Readings/Materials (to be read BEFORE class)

- MacDonald Chapter 12, pages 345-368

Assignment(s)

- Complete the code repository exercises associated with this module
 - [Instructions](#)  
 - [Starting Files](#)
- Complete readings for next class period (see course calendar)
